

Demographic Information

Call Name	Aggi	DOB	September 7, 2019
Registered Name	Aggi	Registration Number	ASCA E214504
Breed	Australian Shepherd	Tattoo	
Sex	F	Microchip	
Owner	Misti Schielie	Laboratory #	AN-21-012715
Co-Owner	Joel Schielie	Report Date	January 28, 2022

These tests were developed and performed by Paw Print Genetics®, Spokane WA.

Explanation of Results

Normal	A 'Normal' result means that your dog does not have the mutation that causes the associated genetic disease.
Carrier	A 'Carrier' result indicates that your dog has inherited one copy of the mutation that has been reported to cause this genetic disease. Your dog may not be clinically affected by this mutation because two copies of the mutation are usually required to cause disease.
Carrier / At-Risk	A 'Carrier / At-Risk' result indicates that your dog inherited one copy of the mutation that has been reported to cause this genetic disease. Based on the mode of genetic inheritance for this particular disease, inheriting one mutant copy of the gene may result in the disease. Dogs with one copy of the mutation may have a milder phenotype as compared to dogs with two copies of this mutation.
At-Risk / Affected	An 'At-Risk / Affected' result indicates that your dog inherited one or two copies of the mutation that has been reported to cause this genetic disease. Based on the mode of genetic inheritance for this particular disease, inheriting one or two mutant copies of the gene may result in the disease.
No Result	'No Result' indicates that we were unable to obtain a genotype for your dog for this specific disease or trait and does not mean that your dog is a carrier or at-risk for this disease. There are a variety of reasons why a specific test may not provide a reportable result. Unique variations in the genetic code of some individuals may exist and cause certain regions of the genome to not perform properly with a specific test. In addition, suboptimal sampling of the dog's cheek cells could also result in poor sample performance due to inadequate cell counts, bacterial and fungal growth, or the presence of other test inhibitors. An acceptable level of tests with no results has been determined by Paw Print Genetics. Dogs with at least 90% of the test results are determined to be acceptable and reportable. If your dog has an

unacceptable level of tests with no results, you will be contacted for a new sample to repeat the testing.

Please review our [testing terms and disclaimers](#) regarding your results.

Coat Colors & Traits

Trait Name	Geno.	Interpretation
------------	-------	----------------

<u>A Locus</u> <u>Agouti</u>	a ^t /a ^t	Tricolor, black and tan
<u>A^s Locus</u> <u>Saddle Tan</u>	N/N	No saddle tan/creeping tan
<u>B Locus</u> <u>Brown</u>	B/b or b/b	Carries brown and may have brown or black coat, nose and foot pads
B Locus (Brown) - b ^a B Locus (Brown) - b ^c B Locus (Brown) - b ^d B Locus (Brown) - b ^s	0 1 1 1	
<u>Brachycephaly</u>	BR/BR	Likely medium to long muzzle
<u>Chondrodysplasia</u> <u>CDPA</u>	No Result	No Result
<u>Cu Locus</u> <u>Curly Hair</u>	Cu/Cu	Straight coat
<u>D Locus</u> <u>Dilute</u>	D/D	Non dilute
D Locus (Dilute) - d ¹ D Locus (Dilute) - d ²	0 0	
<u>E Locus</u> <u>Yellow/Red</u>	E/E	Black
<u>E^g Locus</u> <u>Grizzle, Afghan Hound Type</u>	N/N	No grizzle
<u>E^h Locus</u> <u>Sable, Cocker Spaniel Type</u>	N/N	No sable
<u>E^m Locus</u> <u>Melanistic Mask</u>	N/N	No melanistic mask
<u>H Locus</u> <u>Harlequin, Great Dane Type</u>	h/h	No harlequin
<u>Hr Locus</u> <u>FOXI3 Hairless Gene Test, Mexican Hairless, Peruvian Hairless and Chinese Crested Type</u>	hr/hr	Coated
<u>I Locus</u> <u>Intensity</u>	I/I	Normal intensity
<u>IC Locus</u> <u>Improper Coat/Furnishings</u>	IC/IC	No furnishings, improper coat
<u>K Locus</u> <u>Dominant Black</u>	k ^y /k ^y	Agouti expression allowed
<u>L Locus</u>	Lh/Lh	Longhaired

[Long Hair/Fluffy](#)

L Locus (Long Hair/Fluffy) - Lh ¹ L Locus (Long Hair/Fluffy) - Lh ²	2 0	
<u>M Locus</u> <u>Merle</u>	m/M212	Single copy merle carrier
<u>Polydactyly</u>	pd/pd	Normal (typical) toes (likely no hind dewclaws)
<u>S Locus</u> <u>White Spotting, Parti, or Piebald</u>	S/S	No white spotting, flash, parti, or piebald
<u>SD Locus</u> <u>Shedding</u>	SD/SD	High shedding
<u>Sex Determination</u>	X/X	Female
<u>T Locus</u> <u>Natural Bobtail</u>	t/T	Bobtail

WT: wild type (normal)M: mutantY: Y chromosome (male)

Determinants of coat colors and traits are complex. Many of these variants are known and many of the genes screened in the Canine HealthCheck interact. In addition, not all the genetic factors that contribute to a dog's coat color and traits are known. Because of the complexities in gene-gene interactions, the coat colors and traits reported in your Canine HealthCheck results may vary from your dog's actual appearance. Individual differences in genes throughout the canine genome, not tested in this genetic screen, may also affect the final coat color or traits seen in your dog.

Diseases

Disease Name	Geno.	Interpretation
<u>Acral Mutilation Syndrome</u>	WT/WT	Normal (Clear)

Canine HealthCheck is a product of Paw Print Genetics. This test was developed and its performance determined by Paw Print Genetics®. This laboratory has established and verified the test's accuracy and precision. Because all tests are performed are DNA-base, rare genomic variations may interfere with the performance of some tests producing false results. If you think these results are in error, please contact the laboratory for further evaluation.
